INTRODUCTION TO AZURE PLATFORM

* Aim :

To learn about the basic concepts of Azure.

* Description :

Azure is a Microsoft's cloud computing platform that offers a wide range of services including computing, storage databases, networking and more.

* Key points :

Creating Social media Platform

* Key Features :

- i) User Registration and Login
- ii) Profile creation and customization
- iii) Post creation
- iv) Like, comment, share options
- v) Follow / Friend system
- vi) Search / Explore
- vii) Direct Messaging
- viii) Notifications
- ix) Privacy and Security Settings.

* Important phase in Software Development Life Cycle :

- Strategy
- Design
- Development
- Testing
- Deployment
- Maintenance.

Azure Board :

- Epic
- Feature
- Backlog

* Epic :

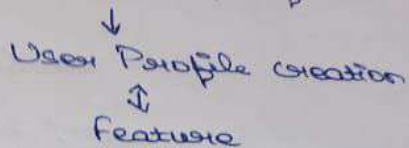

It is like a big project or goal you want to achieve

Eg: Building social media platform

* Feature :

It is a specific part of epic

Eg: Social media platform

* Backlog :

It is a list of all tasks that needs to be done. Features, bugs and Improvements ~~needs~~ to be worked on.

DP
12/2/24

* Result :

The study about basic concepts of Azure is completed.

INTRODUCTION TO AZURE BOARD

* Aim :

To understand the fundamental of Azure boards and its application in managing and tracking working in software development projects.

* Description :

Azure boards is a service within Azure DevOps that provides tools for managing work in software development projects. It offers capabilities such as tracking tasks, issues, bugs and feature requests.

Key Features Includes

1. Work Items
2. Boards
3. Backlog
4. Sprint Planning
5. Analytics

* Notes :

Azure boards is a tool with Azure DevOps designed to help team's plan, track and discuss work across their projects.

* Core Features of Azure boards :

Common work items :

1. Epic
2. Features
3. User stories
4. Tasks
5. Bugs

* Boards :

- Visualize workflows using customizable boards
- Track progress of work items across various stages

* Backlogs :

- Backlogs are hierarchical
- Epic > Feature > Stories > Tasks

* Sprints :

- Manage Iterative development cycle
- Define work for specific sprint, track progress and analyse performance

* Benefits of Azure Board :

- Collaboration
- Customization
- Integration
- Agile and Scrum Support
- Tracking and Reporting

* Result :

Thus the study about Introduction to Azure Board has completed.

Ex No: 03

Date: 18/2/26

CREATE AN AZURE ACCOUNT

* Aim:

To guide the user through the process of creating an Azure account, exploring its features and understanding how to navigate the Azure portal for cloud computing task.

* Description:

This experiment will walk through steps required to set up an Azure account and introduce key features of Azure portal.

* Steps to create Azure Account:

Step 1: Navigate to Azure website: Open your web browser and visit Azure website

Step 2: Sign up for the free account, click on "Start for free"

Step 3: Enter your details such as name, email and phone number

Step 4: Verify identity

Step 5: Select appropriate Subscription plan such as free account

Step 6: Accept terms and conditions, review and accept term and privacy policies

Step 7: Complete setup

* Result:

Thus Azure account is successfully created and verified.

EXP NO : 04

DATE : 01/04/20

SETTING AND PLANNING OF EPICS

* PIM :

To provide description about each and every epic elaborately.

* EPICS :

- i) User Authentication and Profile Management
- ii) Social media Feed and Creation
- iii) Friends and Followers System.
- iv) Messaging and Communication
- v) Notification system
- vi) Search and Discovery.

* User Authentication and Profile Management :

i) Description :

Handles secure user registration, login and account management functionalities. It includes authentication using tokens, profile creation, editing personal details, profile pictures and managing account settings.

* Social media Feed and Creation :

i) Description :

Enables user to create, share and interact with posts in a dynamic feed. Supports text, images, codes and engagement features like likes, comments.

* Friends and Followers system :

1) Description :

Manages user connections through follow/unfollow functionality. Allow users to build their network, view followers and following lists.

* Messaging and Communication :

1) Description :

Provides real time or asynchronous communication between users. Includes one-to-one messaging, conversational threads and potential support for media sharing.

* Notifications System :

1) Description :

Delivers real time alerts and updates to users based on their activity and interactions. Includes notification for likes, comments, follows and messages.

* Search and Discovery :

1) Description :

Allow users to search for other users, posts or contents using keywords or filters. Includes recommendation features to help users to discover trending content.

→ Result :

Thus, we have described and learnt what each epic does and successfully assigned epic in azure.

DESIGNING CLASS AND SEQUENCE DIAGRAM.

* Aim:

To make class and sequence diagram for social media platform project.

* Mermaid code:

class Diagram:

class User {

 ObjectId userId

 String username

 String password

 String bio

 List ~String~ skills

 String location

 Map socialLinks

 List ~ObjectId~ followers

 List ~ObjectId~ following

 Boolean isVerified

}

class OTP {

 String email

 String otpCode

 Date expiresAt

}

class AuthService {

 register()

 verifyOtp()

 login()

 generateJWT()

}

class Post {

Object Id postId
Object Id author
String content
String image
List ~Object Id ~ likes

}

class Comment {

Object Id comment
Object Id post
String username
String text

}

class Forum {

Object Id forumId
Object Id admin
String name
String description
List ~Object Id ~ members

}

class ForumApplication {

Object Id applicationId
Object Id forumId
Object Id userId
String status
String resumeLink

}

class ForumService {

applyToForum()
reviewApplication()

}

class FeedService {

getFeed()

}

```

class FollowService {
    follow()
    unfollow()
}

```

User --> Post : creates
 Post --> Comment : contains
 User --> User : follows
 User --> Forum Application : applies
 Forum --> Forum Application : receives
 Forum --> User : members
 Forum --> Post : contains
 AuthService --> User
 AuthService --> OTP
 ForumService --> Forum
 ForumService --> Forum Application
 FeedService --> Post
 FollowService --> User

* Sequence Diagram :

actor User
 participant Frontend
 participant Backend
 participant AuthService
 participant OTPService
 participant DB
 participant PostService
 participant FeedService
 participant ForumService
 participant Admin

User --> Frontend : Enter Details
 Frontend --> Backend : Post / register
 Backend --> AuthService : register()
 AuthService --> OTPService : generate OTP()
 OTPService --> User : send OTP()
 AuthService --> DB : store temp user()

1.1. OTP Verification

User -> Frontend : Enter OTP
Frontend -> Backend : POST / verify
Backend -> AuthService : verifyOTP()
AuthService -> DB : verifyOTP()
AuthService -> Frontend : JWT

1.1. Create Post

User -> Frontend : Create Post
Frontend -> Backend : POST / post
Backend -> PostService : createPost()
PostService -> DB : savePost()

1.1. Fetch Feed

Frontend -> Backend : GET / feed
Backend -> FeedService : getFeed()
FeedService -> DB : fetch posts
FeedService -> Frontend : return posts

1.1. Forum Apply

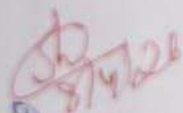

User -> Frontend : Apply to Forum
Frontend -> Backend : POST / forum / apply
Backend -> ForumService : applyToForum()
ForumService -> DB : save application

1.1. Admin Review

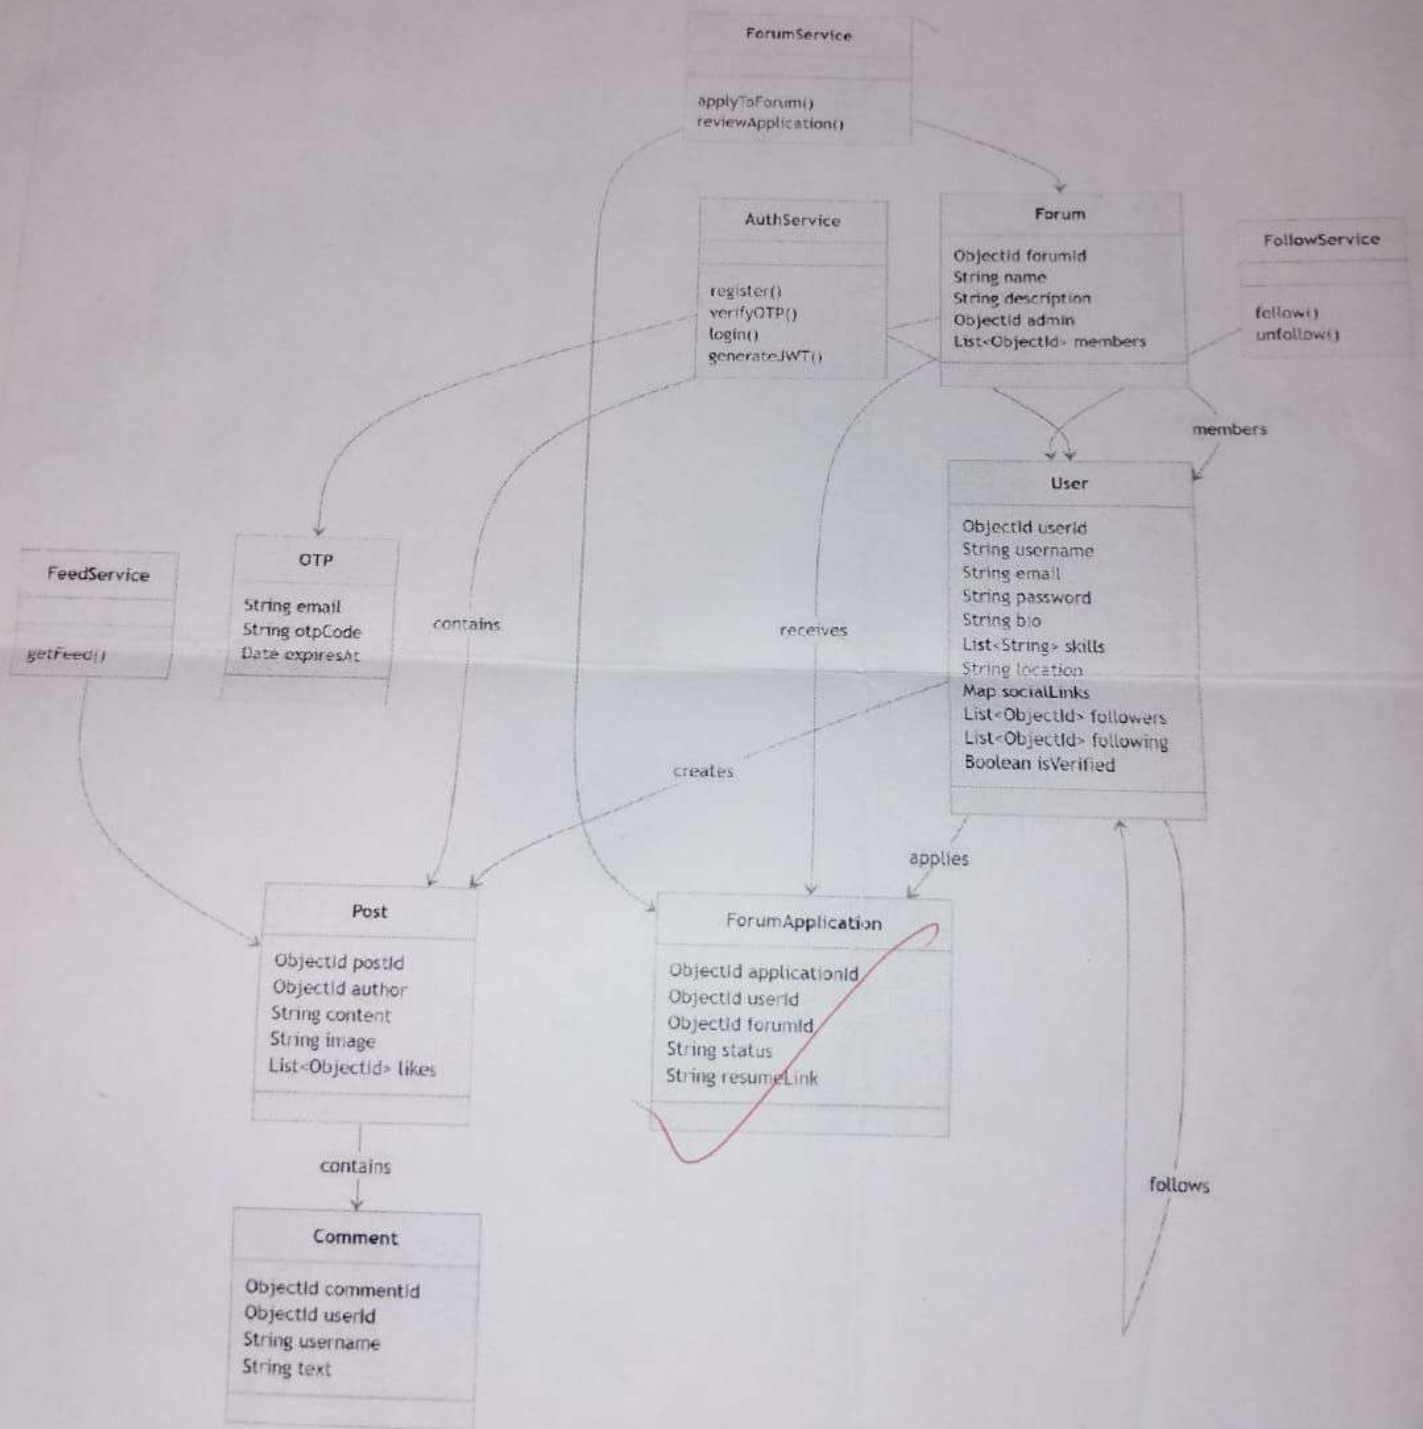

Admin -> Frontend : View applications
Frontend -> Backend : GET / applications
Backend -> ForumService : fetch
ForumService -> DB : retrieve.

4. 7. Refactor

```
Result --> Frontend : approve / reject  
Frontend --> Backend : Post / review  
Backend --> ForumService : reviewApplication()  
alt Refactor  
  ForumService --> DB : add random  
else Refactor  
  ForumService --> DB : update status  
end
```

* Result;

Thus, class and sequence diagram with mermaid code has been added successfully.

SPRINT PLANNING

* AIM :

To strategize and plan for sprint in order to efficiently complete our social media platform.

* Sprints :

1. Foundation :
2. Social core
3. Advanced Features.

1. Sprint - 1 : Foundation

Duration : 7 days.

* Work objective :

- i) User registration and login system
- ii) JWT based authentication
- iii) Password reset functionality
- iv) Profile creation and update
- v) Profile Picture upload.

* Epic Focused :

1. User Authentication and Profile Management

2. Sprint - 2 : Social Core

Duration : 10 days

* Work objective :

- i) Post creation and feed display
- ii) Like and comment functionality
- iii) Sending and responding to friend requests

* Epice Focused :

1. Social media Feed and Creation
2. Friends and Followers system.

3. Sprint - 3 : Advanced

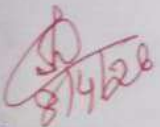

Duration : 14 days

* Work objective :

- i) One-to-one chat system
- ii) Forum for discussions
- iii) Search for functionality
- iv) Follow and Unfollow system

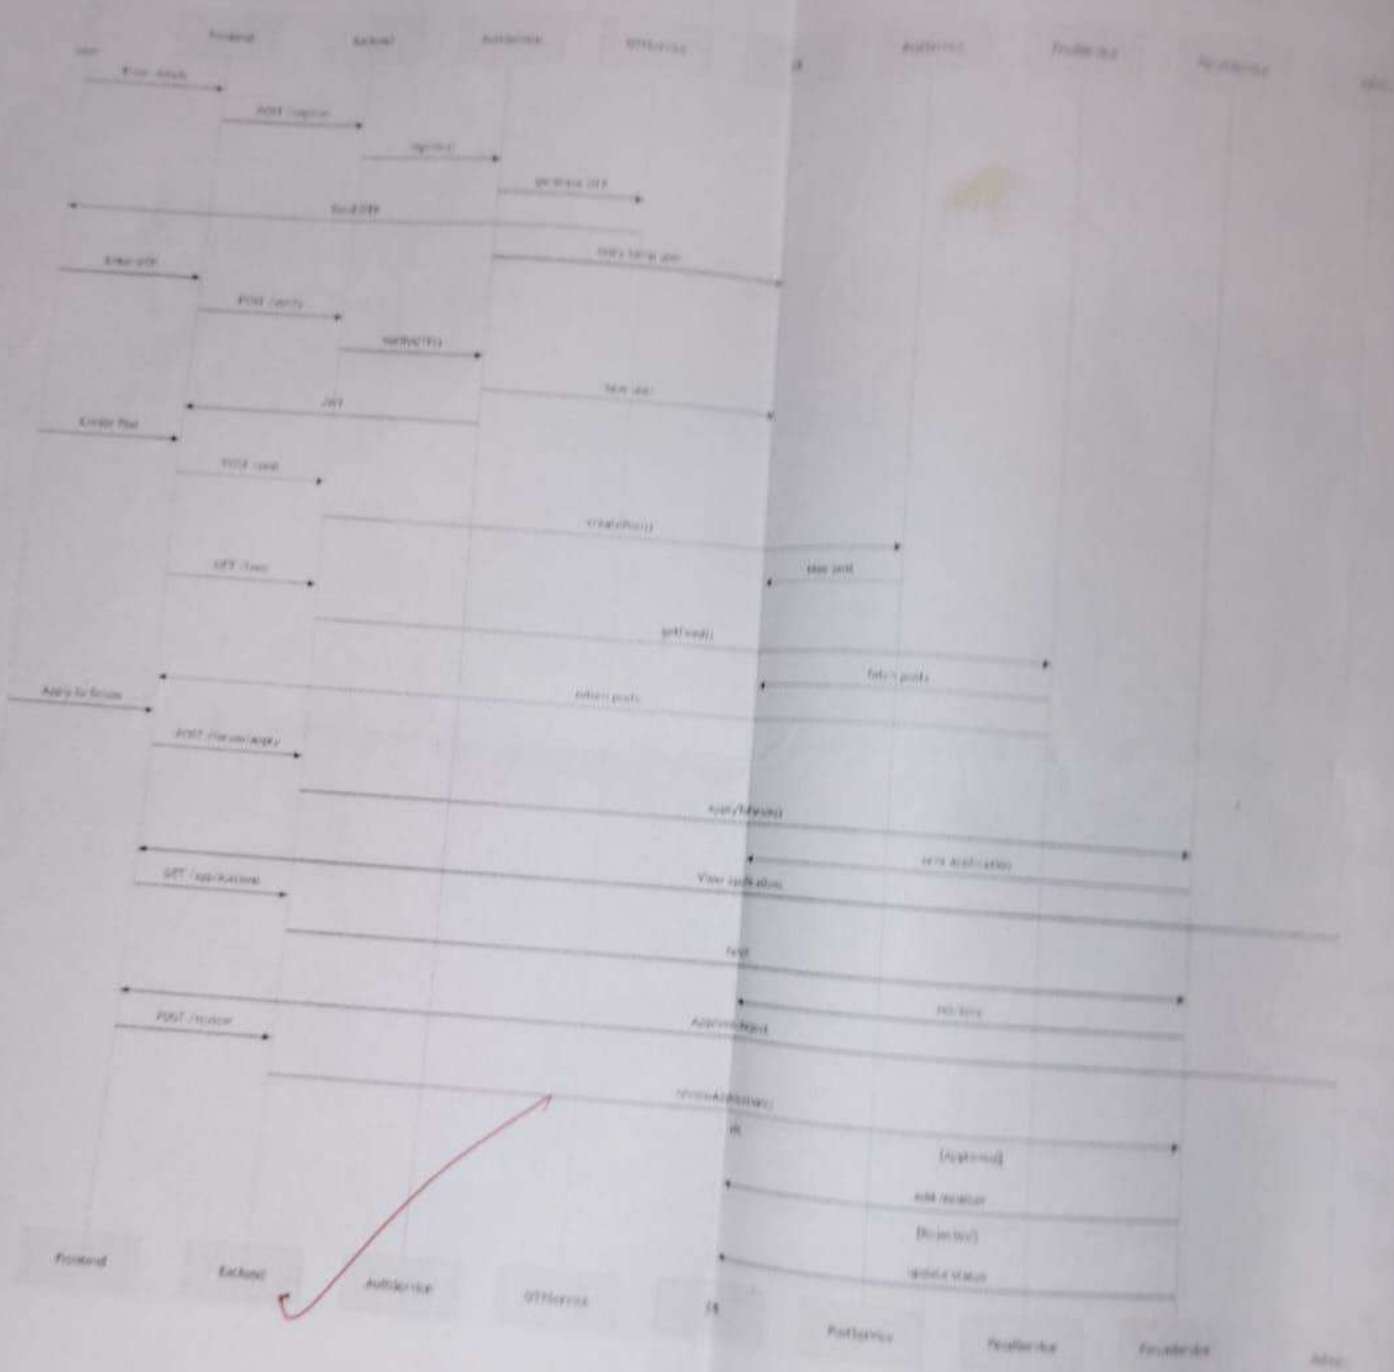

* Epice Focused :

1. Messaging and Communication
2. Search and discovery.

8/4/28

* RESULT :

Thus, sprint planning was done and executed in Azure.

EXP NO: 06

TESTING - TEST PLANS AND TEST CASES

* AIM :

To design and execute test cases using Azure DevOps Test Plans for validating key functionalities.

* PROCEDURE :

- i) Identify core features of system
- ii) Define user interaction
- iii) Create happy path test case
- iv) Create error path test case
- v) Define steps and expected results.

* TEST SUITE :

TSD1 : USER AUTHENTICATION - Test case1 :

Steps :

1. Action : Open Signup page
Expected Result : Signup page is displayed successfully.
2. Action : Enter valid email
Expected Result : Email is accepted without validation error.
3. Action : Enter Strong Password
Expected Result : Email is accepted when password meets requirements and is accepted.
4. Action : Click Register
Expected Result : Account created successfully.

Test case 2 - Invalid Email Registration

Step 1:

Action: Open signup page

Expected Result: Signup page is displayed

Step 2:

Action: Enter Invalid email

Expected Result: System detects Invalid email format

Step 3:

Action: Enter password

Expected Result: Password is accepted

Step 4:

Action: Click Register

Expected Result: Error Message displayed.

* TSD2 - PROFILE MANAGEMENT

Test case 1: Update Profile.

Step 1:

Action: Login to the application

Expected Result: User is logged in successfully

Step 2:

Action: Navigate to Profile Page

Expected Result: Profile Page is displayed successfully.

Step 3:

Action: Edit Profile Details

Expected Result: Changes are accepted.

Step 4:

Action: Click Save

Expected Result: Profile details are updated.

Test Case 3: Invalid Profile Picture Format

Step 1:

Action: Log in to the application

Expected Result: User logged in successfully

Step 2:

Action: Go to Profile Page

Expected Result: Profile Page is displayed
Successfully

Step 3:

Action: Upload photo of an unsupported file
i.e. .txt.

Expected Result: Unsupported file format of
profile photo

Step 4:

Action: Click Save

Expected Result: Unsupported file format.
Profile cannot be changed.

* RESULT:

Thus, test suites and test cases were
implemented and executed successfully.

LOAD TESTING AND PIPELINES

* AIM :

To create an Azure Load Testing resource and run load test to evaluate performance of target endpoint and to create and demonstrate an Azure DevOps pipeline

* Load Testing :

Azure Load Testing :

It allows you to simulate high traffic and stress tests for your web application and API's to understand how they perform under load. It helps identify performance bottlenecks, scalability issues and optimize resource usage before deployment.

* Steps to create an Azure Load Testing Resource :

1. Sign in to Azure portal
2. Create the resource
3. Fill the configuration details
4. Click Review + Create, then create
5. Once deployment is complete, click go to resource

* Steps to create and run a load & Test :

1. Go to your Azure Load Testing resource and click ADD HTTP requests > Create.
2. Basics Tab
3. Load settings
4. Click Review + Create > Create to start test

* Pipelines :

This experiment demonstrates how to connect a Github - hosted flask-based ~~web application~~ ^{social media} project with DevOps. The pipeline ensures that every commit triggers checks for availability and smooth deployment.

* Steps :

1. Connect Github to Azure DevOps.
2. Create Azure - pipelines.yml in your Repo Root
3. Run and monitor pipeline

* Test Suite :

TS01 - User Authentication

TS02 - Profile Management

* RESULT :

Successfully create load testing resource and also demonstrated pipelines in Azure DevOps.

GITHUB : PROJECT STRUCTURE & NAMING CONVENTIONS .

* AIM :

To provide clear and organized view of project's folder structure and file naming conventions, helping contributors and users navigate, understand the social media platform project.

* Result :

Thus, the Github repository clearly displays organized project structure and consistent naming convention.
